

Netradyne Automation

User Guide

Software file: Netradyne_v1.0.0.exe

This guide explains how to run the tool, select the report duration, and find the downloaded CSV report.

Important

Keep both windows open while the tool is running: the browser window and the black Command Prompt window. The tool will ask you to press ENTER in the Command Prompt after you select the duration in the browser.

Quick overview

Item	Details
Application	Netradyne_v1.0.0.exe
Website opened by the tool	Netradyne GreenZone Statistics page
User action required	Log in the first time, select Duration, then press ENTER in the Command Prompt.
Output folder	C:\Users\<your username>\Documents\netradyne\Reports
Output file	A CSV report named using the selected duration, for example: report_10 May - 16 May 2026.csv

Step-by-step instructions

1. Open the software

Double-click Netradyne_v1.0.0.exe. A browser window and a black Command Prompt window will open.

2. Log in the first time

On the first run, the browser may open the Netradyne login page. Complete the login in the browser. From the second run onwards, the tool should normally reuse the saved browser session and go straight to the report page.

3. Wait for the tool message

Wait until the Command Prompt shows a message similar to: Select 'Duration' in the browser and press ENTER here to continue.

4. Select the Duration in the browser

Go to the browser, click the Duration field, choose the start date and end date for the report, then click Select.

5. Press ENTER in the Command Prompt

After selecting the duration in the browser, return to the Command Prompt window and press ENTER. The tool will then collect and download the data.

6. Wait for the download to finish

Do not close the browser or Command Prompt while the tool is downloading and preparing the report.

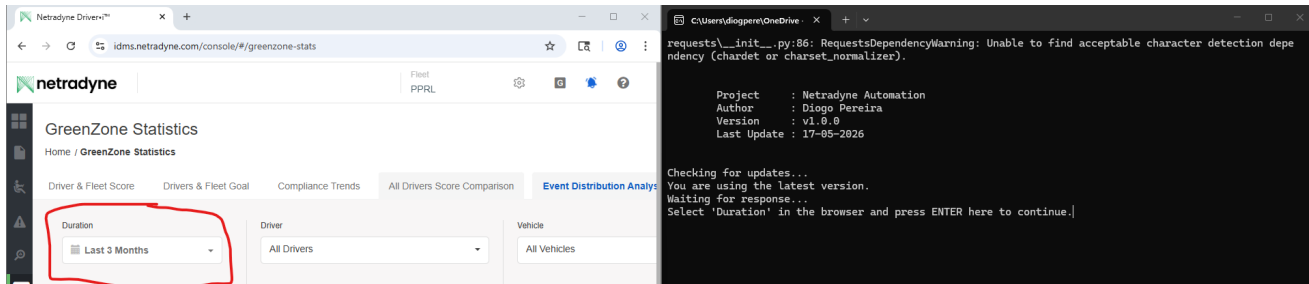

7. Open the report folder

Go to Documents > netradyne > Reports. The CSV report will be saved there with the selected duration in the file name.

Screenshots and visual guide

1. Tool waiting for Duration selection

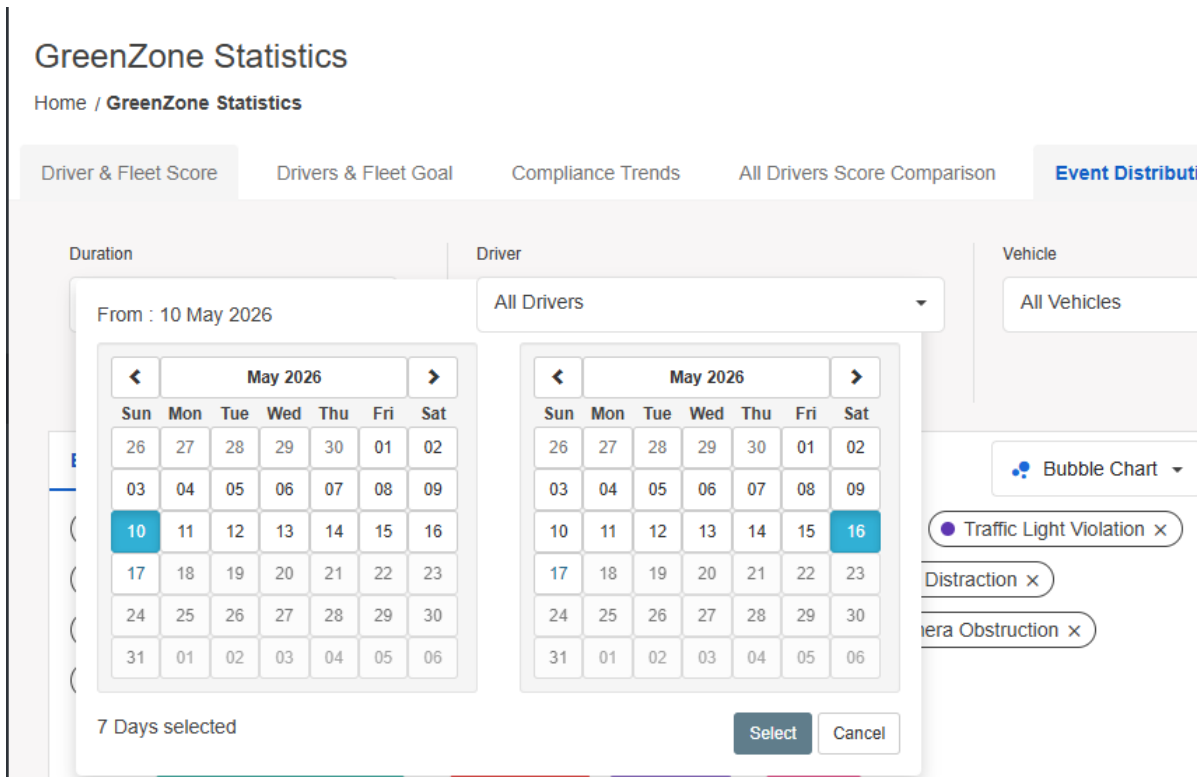

The Command Prompt will tell the user when to select the duration. The Duration field is located in the browser on the GreenZone Statistics page.

Screenshot 1 - Command Prompt message and Duration field in the browser

2. Selecting the date range

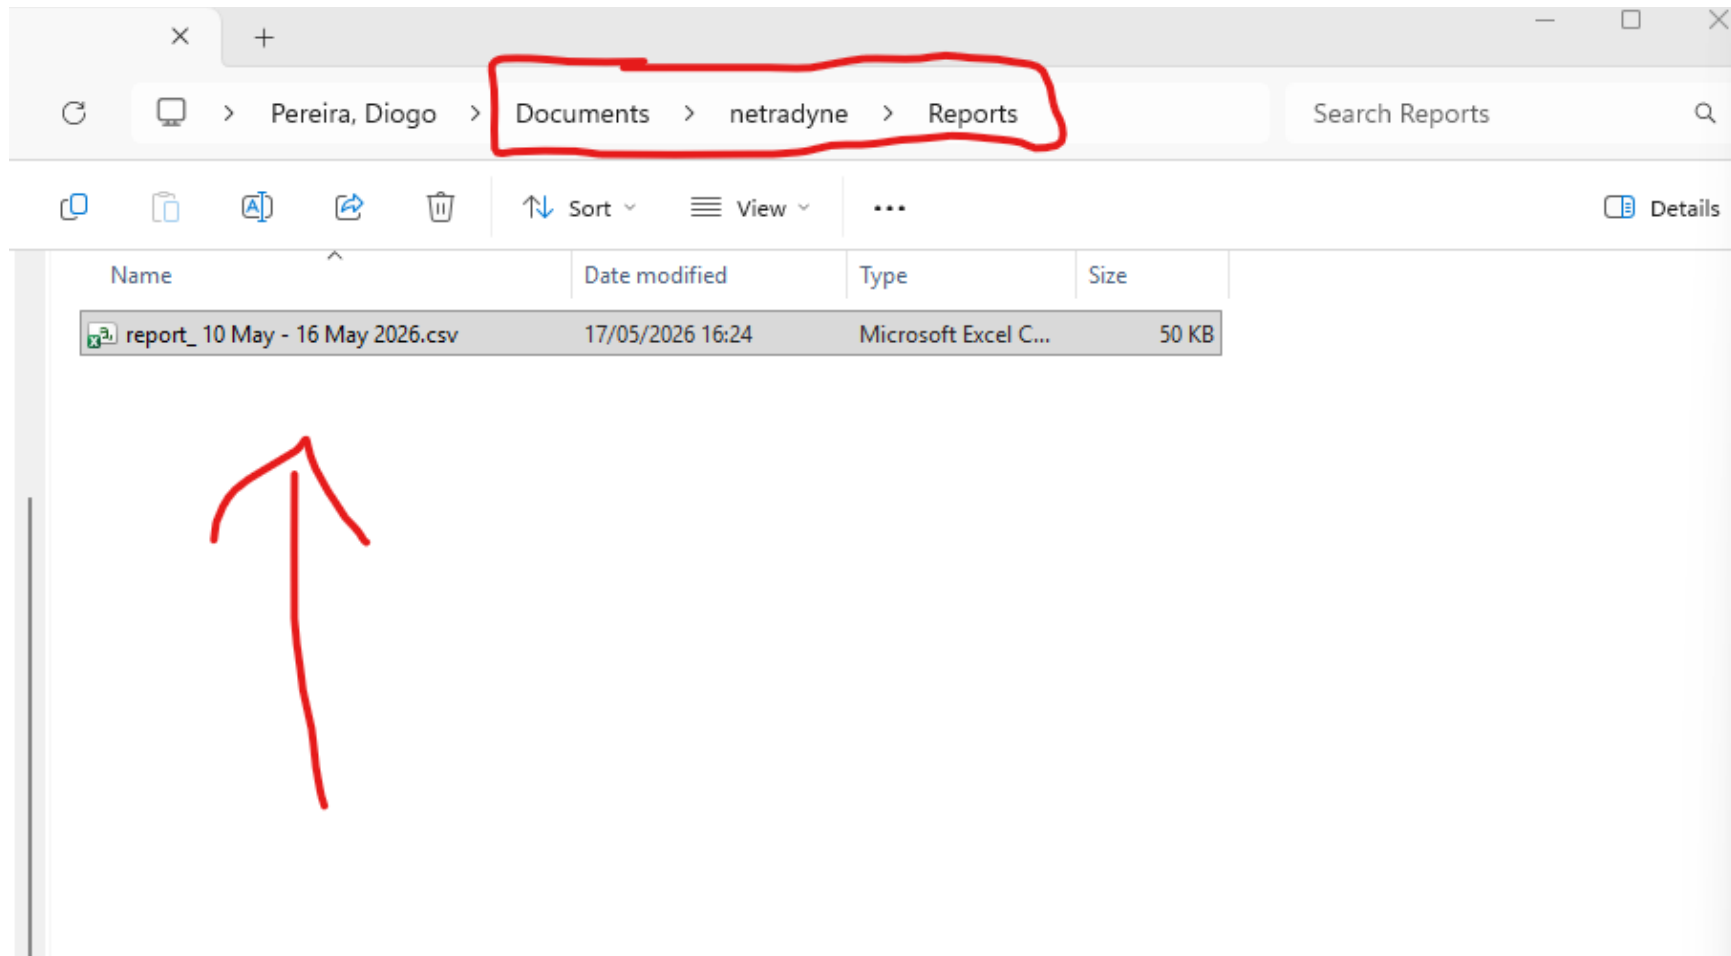

After clicking Duration, choose the required start and end dates. Click Select when the correct range is highlighted.

Screenshot 2 - Example date range selected in the Duration calendar

3. Finding the downloaded report

The report is saved in Documents > netradyne > Reports. The file name will include the selected date range.

Screenshot 3 - Report saved in the Reports folder

4. Opening the CSV report

The CSV can be opened in Excel. It includes columns such as Date, Registration Number, Alert Severity, Alert Type, Event Description, Driver ID, and Driver Name.

	A	B	C	D	E	F	G

User reminders

- Only log in manually the first time, unless the browser session expires later.
- Do not press ENTER before selecting the Duration and clicking Select in the browser.
- Do not close the browser while the tool is running.
- Do not close the Command Prompt window while the tool is running.
- The report will be saved automatically in the Reports folder.

Troubleshooting

The browser opens the login page again: Log in again. This can happen if the saved session expired.

The tool is waiting and nothing happens: Check the Command Prompt message. It may be waiting for the user to select Duration in the browser and press ENTER.

The report is not in the Reports folder: Confirm the duration was selected and the user pressed ENTER after clicking Select. Then run the tool again.

A warning appears at the top of the Command Prompt: If the tool continues to run normally, this warning can usually be ignored by the user. It is not part of the report data.

Final result

At the end of the process, the user should have a CSV report in the Reports folder. The report can be opened in Excel and used for analysis, sharing, or further processing.
